

EXTENSION PANEL FOOTWELL LIGHTS MGB

Giving the MGB and V8 models a feature they have always deserved, extension panel footwell lights are amazingly effective - once fitted, you'll wonder how you managed without them before. They also create a warm and welcoming feeling when you open the car door to get in late at night.

Sold singularly, the footwell lights fit easily into Club console extension panels and may be simply connected into the wiring circuit for the centre console interior light.

Moderate skills required. The easy bit is cutting light holes in the extension panels - the hole is already cut in the backing board, so cut a smaller hole in the leather and fold the excess through the backing board hole to make a tidy finish. The harder bit is the wiring - a basic understanding of the MGB's courtesy lamp wiring circuit will be required to wire up the footwell lights.

Basic hand tools required. A craft knife to cut the holes in the extension panels, upholstery adhesive to glue down the leather excess to the backing board once tucked through each hole, plus automotive cable, male and female spade terminals and a terminal crimping tool.
